Take Control of Your **Projects**

Increase profitability
through smooth planning
and execution of projects
and contracts

bileeta

www.bileeta.com

Bileeta Entution empowers your organization to **manage projects** and streamline all costs and resources in order to track, manage and charge the customer based on **accurate costing** with relevant margins. The Contract Billing functionality helps you create complex projects and **assign resources** as well as make cost estimations to relevant projects.

With Entution, the complete execution process of the contract and its **activity specific documentation** can be managed with ease. Projects and Services is **integrated with finance** functionalities to allocate as well as monitor the utilization of necessary funds for the project.

[Features]

Create and manage projects

Entution enables the creation and management of projects where work breakdown structures can be created and activities and documents mapped to each work item. You are able to commence a project immediately and keep track of its progress regularly. The activities required to reach project milestones can be specified, giving management extensive perspective on project costs at each stage of the project.

Keep track of jobs

With Entution, jobs can be created and assigned to a specific project or contract. You can also track direct and indirect costs, and resources allocated to each job. This significantly increases the visibility and accuracy of job costing, providing your organization with a distinct edge in terms of managing costs efficiently.

Once the job has been completed and invoiced, an immediate overview of revenue, cost and profit is available, with a comprehensive analysis on the estimated figures and actuals. You can retrieve the project history at any time in order to identify areas that need to be improved, and also view stagnant jobs to identify reasons for any delays or bottlenecks.

Manage preventive maintenance contracts

Preventive maintenance contracts can be created in order to schedule and manage tasks efficiently, and keep track of accurate costing and billing. Entution provides the facility to set automated billing periods for each contract and ensures a continuous cash inflow from long-term contracts. With Entution, you can create service orders which can be assigned to a specific preventive maintenance contract or service request and track relevant activities in extensive detail.

Utilize resources efficiently

Entution provides comprehensive and dynamic Resource Management with functionalities that spans across the full gamut of enterprise resources utilized by your organization. Each resource will be uniquely identified by Entution and will be assigned with its own cost factors.

Standard costing principles are applied to ensure all activities and its associated resources are tracked, measured and variances monitored. This enables your organization to identify the areas that need improvement thus reducing costs and improving profitability.

[Benefits]

Enhanced project and contract efficiency

Through the adoption of appropriate contract and project management practices, and capturing of critical information relating to the project or contract, Entution empowers the management to smoothly manage ongoing engagements. Estimates are compared against actual values in order to identify discrepancies and inefficiencies. This will ensure that your organization can plan future engagements better and optimize from their learning in order to reduce cost and increase profitability.

Flexibility to adapt

Organizations need to be able to adapt to the various needs of its clients when entering into contracts with them. Entution provides extensive flexibility to create jobs and generate required documents when executing projects and contracts, enabling your staff to meet client needs in a more personalized manner and secure customer loyalty.

Eliminating operational inefficiencies

With Entution resource management, you will be able to identify the inefficiencies that occur at each stage of the operation. The inefficiencies are easily quantifiable through the application of standard costing where any deviations between the actuals and standards can be analyzed as the project progresses. This enables your organization to be proactive in the management of resource utilization, expenditure and to ensure the output is completed as planned.

Moreover, your organization can also ensure that they get in line with planned budgets, increasing profitability and delivering results to shareholders. You will be in more control of operations with the extensive level of information available on resource utilization.
